---

Hello Deana, great to talk with you, and thanks for taking an interest in my site. The site charging code is T 06L 303DD2 06GGCO00.

As mentioned on the phone, we are in the early stages of the RI. We are working with ERT to do some site screening, including geophysical techniques and the use of CPT/LIF. The idea is to develop a more detailed CSM such that we will be able to develop a better/focused RI sampling strategy.

I expect that we will get our information from Phase 1 by the end of the year which will be when we will start planning and developing the RI sample strategy. As we move forward, I will keep you updated.

Brief Background (maps attached for reference)

The Wilcox Oil Company (Wilcox) Site includes the inactive and abandoned Lorraine and Wilcox Oil refineries located in Bristow, Creek County, Oklahoma. The property was utilized as a crude oil refinery by these refineries from the mid-1920s to the mid-1960s and comprise 125 acres. These refinery waste source areas of concern include a backfilled oily waste pond and pit, a breached settling pond, a former pond apparently backfilled with solid refinery waste, and a number of former tank storage areas. The contaminants of concern are lead and organic compounds (Total Petroleum Hydrocarbons (TPH) and Polycyclic Aromatic Hydrocarbons (PAHs)). These contaminants of concern are found in soil, sediment, and waste material.

There are approximately 6 residential properties on the Site and 6 residential properties that border the Site. These 6 onsite properties are located within the former process and tank storage areas, and 4 are currently occupied. All but one of the border properties are occupied.
